Abstract: The manufacturing inspection process for jet engine components, such as fan blades, requires a coordinated real-time control/acquisition system consisting of mechanical/electrical/control/signal processing components. A ... with the real-time control of the mechanical system. The current architecture requires an additional twenty percent of the inspection time to complete the post process. Further complicating the process is the inability to mathematically map the complete part onto a 2-D surface resulting in a multiple segment approach. Though this method has proven successful, the segmented approach increases inspection time and complicates data management.

Identifiers: ...manufacturing inspection process ;

Author Beddow, H.; Black, S.; Read, D.

Abstract: In recent years there has been an increasing awareness of the radiological impact of non-nuclear industries that extract and/or process ores and minerals containing naturally occurring radioactive material (NORM). These industrial activities may result in significant radioactive contamination of (by-) products, wastes and plant installations... scale samples were collected from a decommissioned phosphoric acid processing plant. To determine the nature and concentration of NORM retained in pipe-work and associated process plant, four main areas of the site were investigated: (1) the 'Green Acid Plant', where crude acid was concentrated; (2) the green acid storage tanks... occurs. Compared to the feedstock ore, elevated concentrations ($\leq 8.8\text{Bq/g}$) of ^{238}U were found to be retained in installations where the process stream was rich in fluorides and phosphates. In addition, enriched levels ($\leq 11\text{Bq/g}$) of ^{226}Ra were found in association with precipitates of...

Author Bhanot, G.; Bitar, K.; Black, S.; Carter, P.; Salvador, R.

Abstract: A new method to simulate lattice systems is described. The authors demonstrate the method by computing the complete partition functions of $Z(2)$ and $Z(8)$ gauge theories in four dimensions on lattices of size up to 6^4 . The method yields a clear signal for the first order transition(s) in these models without hysteresis or critical slowing down effects. They show how finite size...

Title: A new method for the partition function of discrete systems with application to the 3D Ising model

Author Bhanot, G.; Black, S.; Carter, P.; Salvador, R.

Abstract: The authors describe a new method to find numerically the density of states of discrete statistical systems. They apply the method to the zero-field, three-dimensional Ising model on a $5/3$ lattice. The method yields an excellent approximation to the partition function and can accurately predict its zeros near the critical points. They argue that the method can be used very effectively even on much larger systems.
